CHAPTER I.

KÛRDISH WOMEN: THEIR STATUS AND OCCUPATIONS.

The Kûrds are to be found scattered all over the Eastern Highlands of Asia Minor, from the Taurus to the Caucasus, as well as in Kûrdistan proper, where the population is equally mixed. Under the name of Kûrd, however, two distinct races are included, who form as great a contrast to each other in physiognomy as in character and manner of life. The one race is nomad, warlike, and full of vivacity, the other is agricultural, pacific, and not remarkable for intelligence.[1] The features of the peasantry are much softer and less pronounced than those of the tribesmen, who have long and rather aquiline noses, prominent foreheads, keen, deep set eyes, generally black, but sometimes grey, or even blue, small mouths, and pointed chins. Their step is firm, their bearing proud and dignified, and at the first glance one sees that they are the lords of the country.

The Kûrds generally are strong, healthy, well-built people, and in spite of the inequalities of climate of the country they inhabit, live to a good old age. The children are clear-skinned, rosy-

[1] The Turkish proverb, "Stupid as a Kûrd," applies only to the peasants of this nation.

[Page 113]

cheeked, hardy, lithe and active little creatures, and the young women—in the Taurus especially—are said to be models of physical beauty. Mr. Milliagen gives the following glowing description of one among the many handsome girls he saw during his residence among these freebooting highlanders: "Her complexion gave me an idea of what must have been the bloom of the forbidden apple of the terrestrial Paradise. Her eyes, of a dark chestnut, shone like brilliants through the veil of her thick, long eyelashes, while nose and mouth were perfect in their delicacy of shape. Though the garments she wore were not of a superior sort, yet through their folds her graceful form could be detected. But what above all contributed to make her really charming was the calm, simple, and, so to say, infantine air which distinguished her countenance and the whole of her demeanour."[1]

173 Some Kürdish families in Boktan and Hakkari claim descent from the Ommeyide Khalifs, and some travellers are of opinion that the tribe of the Rowadi, to which Saladin belonged, may possibly be the same as the modern Revendi, or Rewendi. The chiefs of the Bebbeh clan confidently affirm that they have in their veins English blood from an ancestress called Keighan, the legend concerning whom will be found in a subsequent chapter.[2] Less mythical, perhaps, is the story of the company belonging to the Second Crusade (1147–49), who wandered in a north-easterly direction from Syria, and not being

[1] *Wild Life among the Kürds.*
[2] See p. 174.

for an egg alone) is a notorious commodity. The army officers are believed to visit their village regularly, and all of its inhabitants are held to suffer from "the Russian sickness," a souvenir of the Czarist army. The investigator's interpreter carried on some scandalous conversations with some of these girls until they were driven away by the house-owner, but whether there was serious intention or simply the earthy banter of peasant women is hard to decide. In Egypt it is possible to hear daily such exchanges between fallahin men and women without the slightest possibility of realization. Inasmuch as Balikian has its husbands and sons, it is impossible to believe that any significant proportion of its female population is so engaged, despite the verdict of the Rowanduzis and the wild boasts of the younger army officers.

If there is any occupation in the town which carries with it the double stigma of being at once menial and dirty, it is that of the roasters of meat or kababchis. The kababchi, always in some state of undress and blackened with the smoke of his fire, is hence often of a surly and resentful temperament, and a number of stories, by no means confined to the Kurds, confirm this character. The kababchi works in close liaison with the butcher, from whom he obtains his meat, and, like the butcher, works according to order. Two confine their operations to their houses, while the third maintains a smoke-blackened booth in the bazar. The meat is prepared in two ways, either finely

At an early age, a girl begins to wear a number of braids, 302
and, save when undone in the bath, this type of coiffure [515]
is retained until death. The number of braids varies, and
is usually about ten. The hair is regularly stained a
reddish colour with henna whose use, in addition to being
purely customary, is said "to fortify the scalp." In some
houses, kuhl, a finely powdered sulphide of antimony
moistened with water, is applied to blacken the edges of
the eye. European cosmetics and perfumes appear in most
of the wealthier homes, and younger women paint their
lips and nails. Reddening the hands and feet with henna,
a custom for both sexes at a wedding, is not an everyday
practice. The so-called "Baghdad boil," reported to be 164
caused by larvae laid by a type of fly in the skin, 751
usually of the face, is the bane of women in cities such
as Baghdad or Mosul because of its hideous scar. It is
not found in this area, nor is the technique used to
prevent it from occurring on the countenance, artificial
infection of the ankle or calf of a child. For menstrua- 841
tion clean pieces of rag are used as towels, and sexual [833]
intercourse is prohibited during the period. The cloths
are commonly washed and reused. Tattooing is denied by 304
most men to be done by women of the town, but it is
possible to observe daily female residents of the lower
classes with blue dots or marks inscribed on their faces.
These are either transient servants or migrants from the
villages where the use of tattooing is frequent. In the

One curious fact gradually dawns on an American observer, 825
that almost no one is ever heard whistling, and one of 533
the reasons elicited is that it is supposed to attract
snakes. A few lizards are found in the houses and their 136
value in ridding the rooms of insects is recognised. In
winter most of the pests disappear, and their annoyance is
greatest in the warmest days of summer. A large percentage 164
of the townspeople do not consult the medical officer for 758
their ailments, and, coupled with the deficiency of infor-
mation in the hospital itself, it is thus difficult to
arrive at any exact answer to the question of health. In- 165
fant mortality appears to be high, but an individual who
passes adolescence seems to have excellent chances of
reaching old age. The number of men in the town vigorous 887
at sixty, seventy, and eighty years is surprising. Ra'uf
Effendi was considering a second marriage at sixty, to re- [761]
place the son who had died (at the age of eleven "of the
evil eye"), and Shakir Effendi led an extremely active
life at eighty-five, walking up and down the steep slope
of the town eight times each day. Dysentery troubles al- 164
most everyone, and there are a few cases of malaria every
summer. Most housewives have a series of remedies for 757
everyday complaints, but it cannot be denied that a 759
physician who commanded the respect of the townspeople
would find himself most welcome.

In concluding this section it may be observed that 177
there have been a number of changes in household life since

4: Hansen E-5 (1957) 1961 MA11 Kurd MA11

DEATH

Hospitals, naturally, are to be found in provincial towns like Halabja and Sulaimani and, of course, in the larger cities in the country. In Halabja I found that the male ward only had male nurses. In the villages there was no doctor, only, for example in Sargalu, a trained male nurse with a supply of medicaments for distribution[77]. In regard to the attitude to medical assistance, my interpreter's father refused to allow a doctor to be summoned or for any of the patients in the house to be taken by cab to see one, during the outbreak of Asiatic influenza in Sulaimani in 1957. In the same house my interpreter's mother refused to seek medical aid for rheumatic pains in the back and possibly fever. One of the daughters stood on her back whilst she lay huddled up on the floor and massaged her in this way. A child in Topzawa with fever, who was taken to the small hospital at Dokan on the following day, was the day previous undressed by an elderly woman and smeared over the whole body with freshly-churned butter.

The sick bed in the home is only used when the patient cannot stand up; even influenza patients in Sulaimani were taken on evening visits to the neighbours. For headaches they were given a bandage round the forehead[78], and sufferers often went to sleep in the house where there were guests, reappearing later in the evening. During the influenza epidemic, no measures were taken to isolate the eating and drinking utensils of the sick from those of the rest of the family. Spitting was much resorted to in the courtyard, on the clay roof and on the clay floor[79]. Broken arms and legs were ill tended, grew together badly, resulting in mis-shapen limbs, cases of which I observed with small children both in Sulaimani and Serkan. There was no snake serum in the villages. A harvester in Topzawa and a boy in Balkha who were bitten by snakes were taken by mule and later by hired car or bus a long distance to hospital for treatment. Spraying with DDT was used against vermin in the part of Kurdistan I visited. There letters painted on the walls of houses indicated that this had been done. According to Wilkinson, this spraying is done annually in the villages[79].

Neither the sick nor the dying were isolated even if it was possible to arrange a sickroom in the house.

Burial. No deaths took place among adults in the homes I stayed in in Kurdistan, but outside the mosque at Mirza Rustam I had an opportunity to study the two objects used for the washing and transportation of the dead. The one was an oblong, very large knee-high table with a very heavy top and thick legs on which the corpse was washed. This was lent out for three days to the home where death had taken place and was then returned to the mosque—an understandable arrangement as in this cultural pattern the table is not a settled institution, but an exception. By the side of this laying-out table stood a bier, an oblong, wooden crate with a flat base, low legs and two short carrying poles at each end. This also belonged to the mosque. On this the body, clad in an unsewn sindone and wrapped in the ceremonial, but without a coffin, was transported to the burial ground outside the town[77]. The same type is found in Arabia[70] and Egypt[70].

Two children's deaths, a little girl's and a little boy's, took place among the people I lived with. Even though it was a matter of a child's funeral I observed certain differences, which have their parallels in adult funerals. As soon as death had taken place the child was taken up from its cradle

The economy of Kurdistan is primarily pastoral and agricultural. The nomads in particular are rich in sheep and goats, and their wool, goat hair and dairy produce are always in demand. Rough carpets and cloth for the national costume are woven both by the nomads and in the villages. The principal winter crops are wheat and barley; wheat from the Arbil plain and the Mosul district is reputed to be the best in the whole country and commands a high price; in most years there is an exportable surplus, but there is always a danger of drought and famine. In summer wherever there is water the villagers persist in growing rice for their own needs in spite of official discouragement and the grave prejudice to health from malaria which is directly traceable to it. Minor irrigated summer crops are maize, millet and lentils. The most valuable money crop is tobacco, of which enough (9,000 tons in 1954) is produced for the needs of the whole country, and to spare. Other local products are walnuts, oak-galls, gum tragacanth, and sumac. Timber for building is floated down the major rivers, and, on the Little Zab in particular, rafts of inflated skins called *kalak* still carry grain and other north-country products more cheaply than other forms of transport. Recent introductions to Kurdistan which are doing well are cotton and sugarbeets. Baghdad is almost exclusively the market for all these commodities. Raisins and dried mulberries from the highlands are generally taken to some nearer point in the plains to be bartered for wheat and barley.

Apart from the great oil industry which has grown up round Kirkuk since the first gusher was struck nearby in October 1927, there has so far been little industrial development. But many Kurds have been trained by the Iraq Petroleum Company in various branches of engineering, and large technical and industrial training colleges established or projected at Mosul and Kirkuk are well placed to attract Kurdish students. Private enterprise may thus be expected to supplement in due course an ambitious governmental programme.

This programme has been made possible by the enhanced and steadily increasing oil royalties which have accrued to the government since 1952 ($250 millions in 1953) and from which the northern *liwas*, like the rest of the country, have already derived great benefit: foreign experts have been engaged to advise on improved methods of cultivating and processing tobacco; a second experimental farm has been started near Sulaimani; artesian wells are being brought in for stock watering and for irrigation where suitable; old roads are being remetalled and new roads opened up; rivers and streams are being bridged; municipal housing, electricity and water schemes are being subsidized; particular attention is being paid to schools and hospitals; a cement factory is nearing completion near Sulaimani; a power station with an initial capacity of 60,000 Kw. (and an ul-

K 731 ● 164 This division[1] probably will not last long. The great famine and drought of 1916-1917 have greatly reduced the numbers of flocks, and the typhus and other epidemics have rendered many powerful tribes insignificant.

142 147 It is noticeable that a Khurasani Kurd differs in his physical structure from his kinsmen in the West, *i.e.* in the real Kurdistan, exactly as the Persian peasant of Khurasan differs from a western. The Khurasani Kurds are much taller and stronger, but their features are not so finely cut, and the facial angle is not as high as the one seen in the west. The Khurasani Kurds resemble Lurs more than the western Kurds in their physical type, although fair-haired individuals are much rarer amongst them.* They are a comparatively healthy race except in the vicinity of cities, where disease and opium smoking are frequent.

619 628 186 There is a great deal of unity between all these different tribes, and the feuds which are so common in Kurdistan proper apparently do not exist. Like all nomads, Kurds possess a greater national feeling than the settled Persians. There are apparently no great differences between the local idioms, and intercourse between tribes is very common; even intermarriage is very frequent.

197 191 The language of the Khurasani Kurds belongs to the so-called Northern or the real Kurdish family, and is connected with the dialect of the Mukris more than with any other known idiom. It has, however, several discrepancies from that original tongue. The Khurasani Kurdish is greatly influenced by the laws of the Khurasani Persian phonology. The vocabulary varies very much in different localities, and is either replete with Persian terms in the south, or with Turkish in the north. Many Kurdish families are bilingual, especially in the north, where they often speak better Turkish than Kurdish.

B 221 177 162 197 I 162 563 *Baluchis.*—This is another important tribe of Iranian origin living in Khurasan. They are nomads. Very rarely isolated families become settled, but in one or two generations they lose all connection with the Baluchis and become assimilated with the Persians. The Baluchis who extend their wanderings far to the north, live in the districts of Juwain, Nishapur, Turshiz, etc., and have already lost their original language. Further south their idiom resembles the original tongue, *i.e.* the Makrani dialect of Baluchi. Very little exact information about their language and folk-lore is available at present.

B 142 157 Physically Baluchis differ considerably from Persians and Kurds. They are usually much smaller, their features are not so regular, and their facial angle is often very sharp. They are an unsightly, lazy, apathetic people, although they possess much predatory spirit. Their seasonal [between nomadic and sedentary way of life.—Analyst]

K 142 302 * The impression concerning this may not be correct, because the adults dye their hair with henna and always keep the head covered. But it seems that in Kurdistan proper one sees more numerous fair-haired children than in Khurasan; in the West they may be mistaken for Europeans.*

4c Wilson G-3 (no date) 1937 MSS Iraq M51

000 of Assyrians under the Assyrian bishop, Mar Sergis, a jovial Friar Tuck of the Nestorian Church.

K 137 Kurdistan is a beautiful country. It is in the main well wooded, with scrub or stunted oak on the hillsides and poplars, walnuts and mulberries near the villages. Pines grow in two areas only and chinars (planes) along the streams. Unfortunately, deforestation is proceeding apace, and unless immediate and drastic steps are taken by the 'Iraq Government, heavy soil erosion and a tremendous decrease in grazing facilities will take place. Few new walnut trees are to be found owing to a prevalent superstition that the planter of a walnut tree will die with the appearance of the first nuts. It might be supposed that the oldest inhabitants could be employed in planting, but apparently the grandfathers look askance at this suggestion!

K 181 The Kurds are a virile and cheerful people. They have been called treacherous, and undoubtedly stories can be quoted in support of this accusation. Yet it must be remembered that the annals of our own Scottish highlands are by no means clean in this respect.

K 164 221 342 In the summer the valleys of Kurdistan are, unfortunately, very malarial, and this is fostered by the cultivation of rice with its invariable accompaniment of mosquitoes. During this season most of the flock-owners move to their "ziaktas" or summer shellings on the mountain tops, where, in shelters of oak branches, they pass the time pleasantly enough.

Christians

I 795 The Christians of the northern provinces are divided into numerous sects, several of which are relics of the old schismatic divisions of the Eastern Communion. They include Chaldeans and Syrian Catholics, who are under the control of Rome, Jacobites, Armenians, Nestorians and Seventh Day Adventists.

I 795 167 563 648 162 Chaldeans, Syrian Catholics and Jacobites are found in Mosul and many villages on the left bank of the Tigris. Chaldeans are also found in the Supna valley near Amadia and in one large village near Arbil. Seventh Day Adventists only flourish in Mosul. Many people in England know something of the Assyrians and their recent history. The Assyrians themselves claim to be descendants of the famous kingdom of Nineveh and are certainly semitic. The term "Assyrian" now includes ex-Ottoman members of the Nestorian Church who were domiciled either within what is now the 'Iraq state or who were ejected from Hakkari by the Turks during the Great War and refused
